

**ABSTRACT OF THE DISCLOSURE**

A computer keyboard device comprising a decorative sealed vessel comprising a first liquid, a second liquid, and at least one structure. The structure is insoluble in both the first and second liquids, and floats on the first liquid. The first and second liquids are immiscible and  
5 the first and second liquids have densities such that the first liquid is beneath the second liquid. The structure can maintain its upright position and remain in suspension permanently. The decorative sealed vessel is an integral portion of the computer keyboard.
